

DATA SHEET

Lifting Assembly for Block Testing Platens

50-C9060/A Platen lifting device during operation

General description

All the compression testers or frames series 50-C25xxx, 50-C35xxx, 50-C47xxx, 50-C57xxx, 50-C69xxx and 50-C79xxx, are factory upgraded with upper and lower block platens 510x310mm.

For easier placement of distance pieces to reduce, when necessary, the vertical daylight we suggest the use of the lifting devices.

Two models are available:

- Lifting device for bottom block platen for easier placement of distance pieces compatible platen size 310 x 510 x 50 mm thickness.
- Lifting device for bottom block platen for easier placement of distance pieces compatible platen size 310 x 510 x 90 mm thickness.

Products

50-C9060/A

Heavy duty manually operated lifting device for lower platen for block compression machines. Compatible platen size 310x510 mm x 50 mm thickness

50-C9060/B

Heavy duty manually operated lifting device for lower platen for block compression machines. Compatible platen size 310x510x90 mm thickness
